

SALVATIO WHITEPAPER

FIND YOUR MISSING PET

*A PROJECT DEDICATED TO SAVE LIVES BASED
ON THE INNOVATIONS OF THE BLOCKCHAIN*

1. Background

1.1 Initial argument of the Project

1.2 The problem

1.3 Here comes Salvatio Project

2. Project Guidelines

2.1 What the Salvatio Project has been doing so far?

2.2 What does this project plan to become?

2.3 How will Salvatio work?

- o Search system on Salvatio
- o Found system
- o Tracking system
- o Salvatio Community Standards
- o Reward system
- o The Salvatio Token

1. BACKGROUND

1.1 INITIAL ARGUMENT OF THE PROJECT

How many times have you witnessed such a scene? How many people do you know who have gone through this? If there's one thing we all agree on is that Pet is a member of the family! Knowing this, it is easy to perceive the pain and despair of a family that loses a loved one in this way.

Currently, there are more than 1 billion pets in the world, of the most varied species, although there is a predominance of dogs, cats and birds.

TOP 20 DOG POPULATIONS	
USA	69,929,000
Brazil	35,800,000
China	27,400,000
Russia	12,520,000
Japan	12,000,000
Philippines	11,600,000
India	10,200,000
Argentina	9,200,000
UK	9,000,000
France	7,570,000
South Africa	7,400,000
Poland	7,311,000
Italy	7,000,000
Germany	5,300,000
Ethiopia	5,000,000
Spain	4,720,000
Romania	4,166,000
Australia	3,700,000
Czech Republic	3,152,000
Hungary	2,856,000

TOP 20 CAT POPULATIONS	
USA	74,059,000
China	53,100,000
Russia	17,800,000
Brazil	12,466,000
France	11,480,000
Germany	8,200,000
UK	8,000,000
Italy	7,400,000
Ukraine	7,350,000
Japan	7,300,000
Poland	5,550,000
Romania	3,891,000
Spain	3,385,000
Argentina	3,000,000
Netherlands	2,877,000
Hungary	2,240,000
Australia	2,200,000

Switzerland	383,000
Sweden	322,000
Austria	281,000
Romania	264,000

Source: <https://www.petsecure.com.au/pet-care/a-guide-to-worldwide-pet-ownership/>

Because it is becoming more common to have pets at home, it is more common to have pets lost in cities.

According to the PetFinder portal (www.petfinder.com), only 10 million dogs in the United States are lost every year; 1 in 3 will get lost at some point in your life.

In addition, many of the pets found lost on the streets end up being taken to shelters, since there are no effective ways to identify and communicate to the family that the pet was found. According to the portal, 22% of dogs lost and have gone to a shelter have been able to find their family, whereas for cats only 2% return to their homes.

1.2 THE PROBLEM:

Although everyone is now connected to some social network or platform, there is no way to gather all the scattered information about lost pet's cases. Even in cases where the pet is found, it is very difficult for it to return safely to home, as only street signs and lost posts on social networks do not eliminate the need for a direct contact between the pet owner and who found him, resulting in animals being delivered to shelters or back to the streets, and consequently decreasing their chances of finding their home again.

1.3 HERE COMES SALVATIO PROJECT:

Salvatio Project delights in every global effort to find missing pets. As human beings that care for the welfare of all people around the globe, we have always felt that our efforts can never be enough.

Then we started thinking.

We have the power of TRON Network that continues to connect people from all walks of life and from most corners of the globe. On top of that, we have the power of the upcoming Decentralized Exchanges, that provides us the freedom to fund all sorts of different initiatives and to reward those who go above and beyond the call of duty.

We also have the speed and the permanent record of blockchain technology. Instead of waiting 72 hours, we can communicate reports of missing/found pets in a matter of seconds. Every report goes on a ledger that is the blockchain, which serves to give us a permanent record of events.

The more people that join our ranks, the more powerful and effective our search and rescue attempts will be. In the coming days, weeks, and months we will continue to share our story in more detail. We encourage you to join us now, as we will put to use the expertise of everyone who wants to be involved. We hope to see you on our Telegram group in just a few moments.

Many initiatives have been developed to try to solve the global problem of disappearances, however, it does not seem to diminish. The Salvatio Project was born as an innovative alternative and aims to adapt in the best possible way to the needs of the community, with the help of all of you, we hope to build a global network of people capable and willing to help, without any kind of discrimination of race, gender, age or social class, Salvatio is being developed to reach everybody everywhere, so here, nobody is excluded. Our goal is not only to spread messages of disappearances, but to help in the search, to provide support to families and friends and to create prevention

programs for the community, among many other things, which with the help of you we hope to achieve. In addition, we have plans in the near future to design a special collar that will change things forever.

2. PROJECT GUIDELINES

*This section is about how Salvatio Project plans to react to the global problem of disappearances, questions like: **what are we doing right now? What do we hope to do in the future? How will we do it?** They will be answered in the next pages.*

2.1 WHAT THE SALVATIO PROJECT HAS BEEN DOING SO FAR?

Since its beginning in August 2018, the Salvatio Project has had its base of operations in Telegram app, from where it has focused on:

1. Publicize the general idea of the project
2. Start and establish the Salvatio community with members from around the world
3. Create a server in the Telegram and Discord chat applications to maintain interaction with Salvatio members
4. Recruit a team to help build the internal structure of the project
5. Form a work team from among the chosen candidates
6. Consolidate the concept of the Salvatio Project and its usefulness

2.2 WHAT DOES THIS PROJECT PLAN TO BECOME?

Purposes:

- o Assist in the intensive and complete search of missing pets through the technology of the blockchain
- o Create a global search and rescue network on a platform that works efficiently, safely and quickly.

2.3 HOW WILL SALVATIO WORK?

In this section we will delve into what we expect to be the official Salvatio platform, specifically the following points:

- o Search system on Salvatio
- o Found system
- o Tracking system
- o Salvatio Community Standards
- o Reward system
- o The Salvatio Token

**WHAT KIND OF INFORMATIONS DO YOU NEED TO FILL OUT
A REPORT ON SALVATIO?**

- 1- Pet's Name
- 2- Age
- 3- Last Location
- 4- Photos
- 5- Special Marks
- 6- Behavior
- 7- Contact Info

Search system on Salvatio:

Now, let's clarify some points:

o When Salvatio receives a report or case of a missing pet, the report will be registered on the TRON blockchain, which automatically become visible to everyone within a distance radius from the original report, or from the same city.

- o After receiving successfully the report, the platform will proceed immediately to perform the location procedures and notify all members within a given distance
- o The case will be made public on the platform, where everyone will be able to view the data of the missing pet, as well as the ones of the person reporting. There will be a reward system for search, where the person who proposed the case may place a reward for finding or helping to find the missing pet. This system will have a system of withholding funds, which cannot be paid until the pet has been found (always with official and verifiable verification).
- o If you filled out a report but do not have money for the reward, if the case is real and verifiable, the Staff will proceed to publish the case in collection mode, where people will decide whether to contribute with the reward by donating Salvatio.
- o On Salvatio, any person can make a report on the platform. The person making the report must be within 1km radius from where the pet disappeared (can change under other terms), accompanying all the identification data of the pet and other information that can help to find it whereabouts (behavior, how to call, special marks, clothing and circumstances in which the pet was seen for the last time, etc.).
- o When the case is published, Salvatio will give the option to publish the case on social networks (Twitter, Facebook and Instagram), and in the corresponding section of the web page.

Found system on Salvatio:

As we know, the case has to be legitimate so, obviously, when finding a missing pet, certain parameters must be met in order to release the reward and place the case in "found" mode.

- o The missing pet must match the information offered by the person who reported the case. The reward will be paid when returning the found pet to home.

o After receiving and verifying successfully the found person report, we will proceed immediately to perform the location procedures and notify all members to inform that the missing pet was found, and then closing the report.

o The person who wants to release the rewards and convert their case from "search" to "found" must be the same person who filled out the report and who handles the case in their account. Only the creator of the report will be able to handle the case and rewards, if there is any.

Collects system:

It will function primarily as a collection system for the user who can't place a reward in an exposed case or where, given the circumstances of the case, the users of the platform decide to add funds to a reward already imposed.

This system aims to create a synergy of funds in Salvatio to help in the incentive of more people helping, through the imposition of collections in the form of an escrow with the platform. These funds will be destined to be released at the time of the finding, rescue and subsequent identification of the disappeared pet described in the case.

There will be 2 classifications for collections on the platform:

- Collects for reward
- Collects for support.

1. Collections for reward:

These collections will be purely for cases of total disappearance where a reward based on the type of open case will be imposed. There are 2 types:

1.1 Independent collections:

Those in which the user does not have funds to establish a total or partial reward in the presented case. The community will decide,

based on the evidence presented, how many funds will be assigned voluntarily to the case (by their own funds).

1.2 Complementary collections:

Those in which the user has funds to establish a partial but not substantial reward to promote a complete search of the missing pet. The community will decide, based on the evidence presented, how many funds will be assigned voluntarily to the case, these being added to the initial reward imposed.

2. Collections for support:

Type of collections destined to the support and help of pets found in precarious situations, for their transportation, medical support or anything needed

2.1 Transportation collections:

For the cases of finding missing pets in areas far from their place of origin. This type of collection will help in the transport / moving of the missing pet.

2.2 Medical support collections:

Aimed at pets found with a poor health condition. Financial support will be provided for their fast recovery.

Salvatio Community Standards:

- ✓ **Stay on topic.** The interactions in the community must be related to the topic of humanitarian aid for the search, rescue and assistance of missing pets.
- ✓ **NO SPAM.** Any act of SPAM is prohibited and will be punishable.

✓ **Be Kind.** We want to contribute to help make the world a safer place and the community will accept with open arms any gesture of kindness on your part.

The Salvatio Token:

The **SALVATIO TOKEN** will be the official currency of the Salvatio Platform. This currency will be used to finance published cases, bounties and everything related to the internal economy of Salvatio.

SALVATIO is possible thanks to the TRON platform, which is a decentralized blockchain that uses the DPOS algorithm. But it is much more than a simple blockchain. TRON offers developers and investors the power to create their own smart contracts.

Smart Contracts have their own currency, which is exactly what **SALVATIO** is. A token attached to the smart contract called **Salvatio**. The Salvatio Platform will be a stand-alone economy that will offer a utility backed by community-driven services accessible through the **Salvatio** tokens.

The tokens will be used as community tokens to pay rewards, used to pay for bounties and other services. In the case of those users who cannot establish a total or partial reward, the community can choose to donate to help pay the reward in legitimate and verifiable cases.

The Salvatio tokens will not only be a valuable asset to invest as TRON continues to grow. The HODLERS community can also use them to help find missing pets by adding rewards in active cases. Funds can also be allocated through collections to verified cases. Because Salvatio is a Utility Token, and one that aims to help with the location and rescue of missing pets, it will have a lot of work to do. So before going into the details of how to acquire the Salvatio Token, let's take a look at the vision of its usefulness as the founder describe it.

In The Words Of The Salvatio Founder:

The Salvatio Project is a self-contained economy and offers utility backed by community-powered services accessed via Salvatio tokens.

Salvatio tokens will be used as community tokens to pay rewards. In the case of those users who cannot afford bounties by their own accord, the community may choose to donate to escrow pools to help pay the reward in cases proven legitimate and verifiable.

The community of token holders will also be able to use them to help find missing pets by setting up bounties. Funds may also be allocated through donations to verified operations to assist in their efforts.

By all means, this is only a small offering of the many good deeds the Salvatio Project may be able to accomplish. The work we do is well underway but we've only just scratched the surface. As we continue to grow in members and the momentum builds, we hope to define our search parameters.
